2025 성균관대학교 인문계 A형

시험일자 : 월 일

점수 : /100

성명 :

[1-5] Choose one that is closest in meaning to the underlined expression. [1.9점]

- The situation for U.S. equity markets is additionally precarious because those markets were closed on Thursday – the first full day of stock trading after Dubai's announcement – for American Thanksgiving.
① perilous ② guarded
③ definite ④ strong
⑤ moored
- This diversification allows the newspaper to engage with readers in various ways, catering to different preferences and making it easier for audiences to latch onto its content.
① turn away ② release
③ despise ④ grasp
⑤ dishonor
- During a dinner with my wife, my son and his wife and our two granddaughters at a beachside restaurant, I caught all of us looking at our phones as we waited for our food, paying no heed to the gorgeous scenery right in front of us.
① ignoring ② acknowledging
③ going over ④ dilating
⑤ outspreading
- Some of the specifics still need to be worked out – how safe is “safe,” how effective is “effective” – but those are the sorts of specifics that a prize committee can adjudicate.
① determine ② dissuade
③ dodge ④ repress
⑤ initiate
- I think the world economy is recovering, although the process of recovery is a slow and torturous one.
① innocent ② agonizing
③ homogeneous ④ virtuous
⑤ delightful

[6-10] Choose one that is either ungrammatical or unacceptable. [1.8점]

- In Israel, the country's missile defense system, the Iron Dome, ① autonomously senses the threat of an ② incoming rocket and sends a warning to an operator, ③ who then ④ gives the command ⑤ firing a missile.
- The ① highly competitive private clinics ② would generally offer ③ whatever therapies ④ seemed trendy – such as diet therapy ⑤ in the late nineteenth-century America.

- He was travelling ① on the wrong visa, ② despite her ③ having obtained that visa for his previous trips to the United States to attend ④ series of similar ⑤ events.
- ① Although neither Tanaka nor Ohasi ② assume a central role in the films ③ in which they appear, their presence onscreen is ④ nonetheless striking, especially ⑤ from our vantage point.
- ① Not only ② does this not ③ involving any major repudiation of liberal thought, ④ but this kind of intervention ⑤ has a respectable pedigree in the thought of Adam Smith.

[11-12] Choose one that is most appropriate for the blank. [2.0점]

- The IUCN Red List now includes a handful of species that have been revived through conservation efforts, including the European white-tailed eagle and the Mekong catfish. Narrow corridors of protected habitat now connect nature preserves in South Africa, and similar corridors link up the coral reefs of the Bahamas, allowing species in the protected areas to move back and forth, exchange genes and sustain their _____.
① populations ② territories
③ originality ④ migration
⑤ wilderness
- The Armenians were active money brokers, borrowing cheaply in Macao and lending expensively in Canton; most Canton merchants were _____ on a large scale. Trade was fraught with risk but the Armenians showed that small itinerant traders could make a profit; they were determined and independent, and readily accepted by both Protestants and Catholics.
① self-sufficient ② prosperous
③ collateral-free ④ in debt
⑤ in surplus
- The chief task of casino design is to arrange the spatial relationships of surrounding areas, the shape and feel of the structural box that encloses the setting in such a way as to encourage machine gamblers' entry into _____ playing worlds. While players prefer gambling in bustling casinos, they want to be isolated in their own private, intimate world from the surrounding hubbub that attracted them in the first place.
① vibrant ② noisy
③ secluded ④ exposed
⑤ communal

14. Officials and state media painted Western countries as hostile and subversive, and critics of the Kremlin were described as 'the enemy within' and collaborators with foreign powers. I began to spend much of my time reporting from courtrooms, charting Kremlin's increasing efforts to _____ all kinds of dissent. It was a dark period that opened with the shooting of one opposition politician, Boris Nemtsov, and covered the attempted assassination of another, Alexei Navalny, with a military-grade nerve agent. Navalny would die suddenly three years later, locked up in an Arctic prison camp for his politics.

- ① establish ② stamp out
- ③ build up ④ create
- ⑤ praise

15. Much of the social and political theory in postwar America extended from the contributions of refugee scholars. In the ensuing years, the emigres' theories of mass society became widely read and popularized as Americans sought to comprehend the dynamics of Cold War geopolitics abroad and dangerous mass tendencies hiding behind atomistic individualism at home. Thus, the mass emigration of European intellectuals in the 1930s and 1940s _____ in the postwar period.

- ① resulted in the distortion of American thought
- ② heightened the political tensions surrounding America
- ③ intensified Americans' sense of isolation amid the crowd
- ④ contributed to developing a new understanding of immigrants
- ⑤ had dramatic long-term effects on the shaping of American thought

[16-19] Choose one that is most appropriate for the blank.

16. _____ can contribute to stories about the human condition under duress more fundamentally. Actors in fictions of an existential slant will struggle against injustice caused by bad people, a corrupt system, or a godless world. Few stories capture more brutally and forlornly the reality of political violence than Jean-Paul Sartre's "The Wall" set during the Spanish Civil War. A prisoner, Pablo Ibbieta, awaits execution and considers the value of life and whether it is worth betraying his principles to give the Fascists the information they want in exchange for his release. The exhausted Pablo does not relent until at the last minute he gives his captors false information about the location of a comrade they are hunting down, unaware that his friend has changed hiding places and has now been betrayed. Through its plot twist, a story about political violence acquires another dimension as a fable of existentialism and the human condition as a trap. [2.0점]

- ① Hate ② Contentment
- ③ Want ④ Courage
- ⑤ Dread

17. The Hollywood sign is perhaps the most conspicuous yet least-_____ landmark in the world. It is monitored 24 hours a day by motion sensors, high-definition cameras and the Los Angeles Police Department, which keeps watch from a TV tower on the hilltop. The public is only allowed to view the letters from nearby trails, though some people still try to scramble up the hill to reach them. [1.9점]

- ① liberal ② unobtrusive
- ③ subtle ④ accessible
- ⑤ conservative

18. This type of work is known as extreme event attribution. One common method compares two versions of the world. The first is the real world – where humans burning fossil fuels have caused global warming. The second is what the world would look like _____. Scientists estimate what that second, ideal world where humans dramatically diminish the use of fossil fuels would look like based on historical weather data and climate models. With some clever number-crunching, researchers can see how likely or severe a weather event is in each of those versions of the world. Hundreds of studies have probed the role of global warming in natural disasters. Many have found that climate change made extreme weather worse. [1.9점]

- ① in the near future
- ② in a brutal heat wave
- ③ without climate change
- ④ in any historical event
- ⑤ despite extreme weather events

19. The asteroid impact triggered rapid changes in the environment. This could have pushed some birds to evolve larger brains quickly. Parrots and members of the crow family have evolved some of the biggest brains of any bird. And larger brains relative to body size often suggest intelligence. The ancestors of parrots probably had large brains that helped them overcome challenges in their environment. After the asteroid impact, this would have allowed them to _____. Birds that learn how to open pinecones with their beaks, for instance, are more likely to survive than those that wait for a crop of berries that might never come. [1.9점]

- ① go way back in time
- ② repeat different sounds
- ③ conceal the target
- ④ learn from others how to sing or talk
- ⑤ outcompete other animals for resources

[20-22] Choose one that is most appropriate for the blank.
[2.0점]

20. So is the economy really doing well? Yes, by practically all measures. Inflation is down, unemployment is low, the dollar is strong and the stock market has soared. U.S. consumer sentiment recently ticked up again, suggesting Americans are feeling pretty good despite higher prices for everything from healthcare to Thanksgiving groceries. That positive consumer sentiment is especially justified when comparing the U.S. with other large, advanced economies. Europe is lagging, with Germany, its economic engine, flirting with a recession and struggling through a political crisis. The United Kingdom is facing a long-term decline, and Japan's aging population and low birth rates bode ill for its future. Even Canada, which usually does well when the U.S. does well, is feeling decidedly unwell these days, imperiling the regime of longtime Prime Minister Justin Trudeau. Still, as anyone familiar with investing has heard many times, past performance is _____. And, in fact, while the outlook for the U.S. economy is better than that of many other countries, it isn't exactly rosy.

- ① remarkably resilient
- ② no indication of future results
- ③ showing first signs of stabilizing
- ④ accurately capturing what would happen in the future
- ⑤ affected chiefly by the stock market

21. Challengers are most successful and satisfied in companies that are hungry for change. Those could be firms in which strong traditions or a stretch of success has made people cautious or complacent. In such circumstances challengers have the most impact, and experience the fewest clashes with their executive teams. The most successful challengers are often proteges of CEOs who want "something different" and value professional expertise. It's worth noting that while many CEOs are uneasy being champions of this approach themselves, they do want it to be represented on their teams, so they hire challengers but don't give them enough support. That kind of ideological tokenism is a _____. And like custodians, challengers can fall out of favor when their work is no longer seen as constructively questioning the status quo but, rather, as a costly subversion.

- ① recipe for failure
- ② learning by doing
- ③ holistic personal growth
- ④ property associated with the growth
- ⑤ desire to learn from the company's culture and habits

22. The USSR was an eager supplier of weapons and political support for many African nations fighting anti-colonialism wars in the 1960s and 1970s. Yet the Russian language didn't make a big foray into the African continent compared to French and English. When the anti-colonial struggles waned, local interest in the Russian language _____. "Moscow support ended at supplying weapons and training for anti-colonialism guerillas. Very few Africans, steeped in traditions of Arabic, English, and French colonialism, were eager to learn the Russian language," says political analyst Kimberly Mutandiro in South Africa. The fall of the Soviet Union, too, meant Moscow didn't have much money to spread its language projects across Africa – a vast continent of 52 countries – unlike in Central Europe and Eurasia, where Russian-language cultures were already rooted.

- ① practically ended
- ② started to flourish
- ③ solidified the diplomatic support
- ④ began to show sophisticated power
- ⑤ just started to grow

[23-24] Choose the one that is inappropriate for the whole context.

[23] [2.1점]

The role of a head-of-state chef stands apart from virtually any other job in hospitality. ㉠ Not least because there are real-world diplomatic implications. "The leader who arrives in your country and who wants to discover it, you can let them discover your culture through cuisines," says Laurent Billi, France's ambassador to Washington. He notes that a mistake during a bilateral meeting can quite literally cause a diplomatic incident while a positive experience can ㉡ smooth over relations. Billi remembers having lunch with a particularly aggressive Asian foreign minister who insisted that western Europe was in decline and Asia was on the rise. By the second course and some French wine, the tone had ㉢ a lingering effect. "Suddenly they were looking at France as a great power in terms of ㉣ gastronomy. The mood and dynamic of the dinner changed after that moment," says Billi. Then there's the ㉤ culinary diplomacy aspect: food gives world leaders and their staff a lasting impression of the country they're visiting, a responsibility that chefs from smaller countries in particular take to heart.

[24] [2.0점]

ⒶTrace the life of Nelson Mandela in Cape Town during his drive to end apartheid, from recruiter for the armed Ⓑresistance in the township of Nyanga to City Hall, where he addressed the public after his release from prison in 1990. ⒸNowhere is Mandela's legacy felt more strongly than in a visit to Robben Island Museum, the onetime prison where he spent 18 of his 27 years of incarceration. With the floor for a bed and a bucket for a toilet, his small cell is a stark reminder of the Ⓓnobility of apartheid and the triumph of the human spirit. Instead of breaking him, the experience transformed Mandela from revolutionary to Ⓔreversed statesperson.

|-----|-----|
| ① A | ② B |
| ③ C | ④ D |
| ⑤ E | |

[25]

One of the core purposes of education, both public and private, is to prepare students for civic life and to be effective citizens in our democracy. When students are unaware of our history and don't have a solid grasp of our fundamental political institutions, they're less prepared for civic life. There's broad consensus that American democracy is experiencing significant challenges, and it is hard to envision us overcoming those challenges unless citizens understand our political institutions and learn how to engage as participants in our civic life. It's also the case that the current moment is not the first time that American democracy has been threatened. An understanding of our nation's history cannot just equip students for civic life, but hopefully also give them a sense of optimism that we can rise to the challenge.

25. The main point of the following passage would be _____. [2.1점]

- ① Why do we need to study math and science?
- ② Should citizens really protect their freedoms in a democracy?
- ③ What is the potential problem associated with free election?
- ④ When did the U.S. teacher shortage start?
- ⑤ Why do U.S. history and civic education matter?

[26]

As scientific understanding in the fields of stress physiology and epigenetics grew over the next two decades, evidence for the weathering hypothesis began to mount. Researchers are increasingly discovering how the health effects of chronic exposure to discrimination within societies could help explain racial and ethnic disparities in health and disease outcomes that aren't accounted for by other factors. Living in a racist society can harm the health of all Black people, even those who don't directly experience racism, according to a public

health researcher. "This is akin to other environmental risk factors for health, such as high levels of air pollution," Devakumar told the *Economist* in a 2020 interview. Early evidence for this phenomenon began to emerge in the 1990s.

26. The underlined "this phenomenon" would mean that _____. [2.0점]

- ① the exposure to economic disadvantage leads to favorable physical health outcomes
- ② the poverty has an influence on poor diet and poor nutrition
- ③ the stress of experiencing racism has a negative impact on the body
- ④ the high temperature ultimately contributes to racism
- ⑤ racism-related challenges do not influence our body and mind

[27]

The amount of popcorn you buy for a movie should probably depend on how much you enjoy popcorn, right? Maybe not. New research shows that people's consumption habits are surprisingly insensitive to their fondness for products. In fact, consumers themselves are bad at predicting how much their preferences will influence their consumption, assuming that if they like, say comedy specials, they'll watch more of them than they do of other offerings – for instance, sitcoms. In six studies researchers asked a total of 1,486 U.S. participants to rank their preferences for various items and estimate how much they'd consume of each in a given period. In one study they were asked how much they liked different flavors of jelly beans and how much of each they'd eat over the course of the experiment. Participants were then offered either their preferred jelly beans or another flavor, along with M&M's. At the end of the experiment, the differences in their consumption of preferred and nonpreferred items turned out to be negligible. And the result was the same in all the experiments, including a real-world study that found that people used the same amount of lip balm during a week whether they received a brand they liked or another one.

27. The main point of the following passage would be _____. [2.0점]

- ① The love for a certain product is not always a good thing.
- ② People overestimate how much their consumption is dependent on their preferences.
- ③ Shoppers should consider consumers' favorite products among other factors.
- ④ Consumers hated jelly beans because they were actually aware of the value.
- ⑤ Consumers tend to consider cheaper alternatives to their unfavorable products.

[28-30]

For many, deconstructing relationships and interactions with parents can be a mainstay of the therapeutic experience. Naturally, as part of this experience, therapists may ask questions about these important dynamics – normally in a neutral, ① _____ way, designed to ensure clients can make sense of things on their own terms. Therapists should beware, though: according to a new study from Lawrence Patihis and Mario E. Herrera, it isn't just negatively framed questions that can change how we feel about our relationships. Even positively framed questions could lead people to reappraise their relationship with their parents.

In their investigation, the team asked 301 US-based online participants to write a short passage, the topic of which changed depending on the condition they were in. For the first, they wrote about positive examples of their mother's warmth, competence, and love; in the second, examples of a lack of these qualities; in the third, negative examples of a teacher. Those in the fourth and final condition did not receive a writing prompt. All participants then completed measures on how they currently rated their mothers on traits like warmth and generosity, reported positive and negative memories of emotions towards their mother at different stages of childhood and in the present day, and rated their current mood. Analyses showed, perhaps unsurprisingly, that those who appraised their mother positively reported feeling significantly happier about their mother than those in the other conditions. Happiness was strongly associated with how positively participants saw their mother. This group also remembered feeling significantly happier towards their mothers during childhood. This suggests that reappraising one's parents can significantly impact your memories from childhood, ② _____ these effects were relatively short lived, lasting around four weeks.

We already know that memories are fallible, and that all sorts of factors can change the way we think or feel about something that's happened in the past. This study underlines that therapists should keep this in mind, and remain cautious of framing when discussing family relationships with clients. The team takes this one step further, and argues that clients should be informed at the outset of therapy about the potential for change in how they see their parents or others in their life.

28. The most appropriate words for the blanks ① and ② are _____. [2.0점]

- ① provocative – as a result
- ② non-leading – though
- ③ remarkable – in addition
- ④ emotional – moreover
- ⑤ impartial – consequently

29. According to the above passage, the author thinks that question framing can influence _____. [2.1점]

- ① the frequency of clinic visits

- ② different kinds of conditions
- ③ how people remember their parents during childhood
- ④ how people forget trivial things
- ⑤ rights and responsibilities of parents

30. Which is true of the above passage? [2.2점]

- ① Memories are inherently impeccable and intact.
- ② How participants appraised their mother affected their feelings about their mother.
- ③ The experiment only takes neutral examples of their mother's warmth into account.
- ④ Participants were always instructed to say something bad.
- ⑤ Participants were asked to anticipate their future mood in order to deconstruct relationships with parents.

[31-32]

Discussions about the fate of large empires are not new. They have been around as long as history books have been written. However, serious policy makers are now engaged in this type of active planning and strategizing within and outside the intelligence community. Around the world, America is seen as the global policeman. America did embrace this role, even though reluctantly, to the detriment of the nation's domestic agenda and often not without scorn from the rest of the world. Whereas the founders wanted no such dominion around the world, and instead believed in liberty, justice, and the pursuit of happiness for all, American policy makers today believe in some form of nation building, both through hard power and soft diplomacy, as part and parcel of their global purview.

In the coming decades, will America go into Islamic lands and try to wage war with those nations that harbor ill will against it and its allies? Although not a practical solution, this type of thinking is not uncommon among policy makers. They see no alternative to an all-out war with the Islamists or the extreme elements in Islamic societies. Can we achieve a middle ground, a compromise solution, and a breakthrough between the more moderate elements in Islam and American civilization? It will be a somber day when the American ideals of freedom, liberty, and equality are sacrificed at the altar of _____. America's founding principles would need a thorough going revision if America the majestic were to turn into a Roman fortress with security walls around its perimeter. America's ventures in Afghanistan are a perfect example of how attempts at nation building might over a longer duration drain the country of its precious resources in terms of human lives and capital as well as military reserves.

31. The most appropriate expression for the blank would be _____. [2.1점]

- ① the victory of Islamic societies
- ② nation building in foreign lands
- ③ a period of happiness and prosperity
- ④ the economic success of a country
- ⑤ the armed force from other parts of the world

32. According to the passage, which one is NOT relevant to others? [2.0점]

- ① nation building
- ② justice
- ③ liberty
- ④ equality
- ⑤ the pursuit of happiness

[33-35]

People generally hold the view that mistakes help humans learn and grow, instead of interpreting errors as a sign of unchangeable defects. But they frequently think AI tools are rigid and not adept at adjusting and evolving—a belief that may stem from past experiences of machines as static devices that carry out limited functions.

Perceptions like that can diminish trust in the technology and create concerns about its efficacy in new scenarios. Studies have indicated, however, that consumer use of AI output rises when people are told that AI has the capacity for adaptive learning. Even nominal cues that imply learning potential, such as branding AI as ㉠“machine learning” instead of merely an “algorithm,” have boosted engagement. Netflix frequently publicizes how its content recommendation algorithm continuously improves its selections as it collects more data on users’ viewing habits. It reinforces that message by putting labels like “for you” on its recommendations and explaining that they were made “because you watched x,” further reassuring users that the algorithm is considering their evolving preferences.

People who think that AI is inflexible may believe that it will treat every person identically, rigidly applying a ㉡one-size-fits-all approach. Indeed, the more distinctive consumers perceive themselves to be, the less likely they are to use AI. In one study, for instance, the more exceptional participants thought that their own ethical characteristics were, the more resistant they were to an AI system that assessed moral qualities. At the same time, there’s a delicate balance between flexibility and predictability. Even though adoption often increases when companies highlight AI’s ability to learn and evolve, if users feel that the outputs of the system are too unpredictable, the intervention could backfire. A more adaptable AI system is also riskier since it allows a greater spectrum of user interactions, some of which may not be captured in the data used to train the AI. When AI is more flexible, it increases the possibility that people will use it in inappropriate ways and that in those cases the algorithms might provide undesirable responses, creating new risks for users and companies alike.

33. The underlined ㉠“machine learning” may suggest that AI has a property of being _____. [2.0점]

- ① too opaque
- ② counterproductive

- ③ emotionless
- ④ unaccommodating
- ⑤ flexible

34. The underlined ㉡“one-size-fits-all approach” suggests that people may think AI _____. [2.0점]

- ① ignores an individual’s unique traits
- ② provides precise responses
- ③ shows a preference towards glaring consumers
- ④ is too expensive to purchase
- ⑤ has an ability to balance flexibility and predictability

35. According to the above passage, the author believes that _____. [2.2점]

- ① nominal cues in branding turn out to be insignificant
- ② moral qualities can never be assessed using AI systems
- ③ AI systems will not be able to handle any input
- ④ there is a trade-off between flexibility and predictability of AI systems
- ⑤ people experience difficulty in understanding the algorithm

[36-37]

Every democracy sets a minimum age for holding office. Some, such as France, are exceptionally liberal, allowing 18-year-olds to run for president, a position with near-monarchical powers. Others are more circumspect. Italy’s president must be at least 50, even though the position is largely ceremonial. But no country sets an upper age limit for wielding power. Should they? Wisdom and experience count for a lot. But so do vitality, dynamism and fresh ideas. North Dakota is leading the charge: in June its voters approved a measure that sets a maximum age for representing the state in Congress. More widely, both Republicans and Democrats favour age limits for politicians and Supreme Court judges by overwhelming majorities, according to a survey by the Pew Research Centre. In Britain, the governing Labour Party has promised to impose a retirement age of 80 on members of the House of Lords, who are appointed for life.

It may sound reasonable for democracies to adopt age limits for those seeking elected office. But to do so would set a dangerous precedent. In a free society both the electorate, and the candidates they vote for, should be as broadly representative as possible on who can vote and whom they can vote for. The more governments impose limits on who can stand, the greater danger that such limits will be subject to political meddling. _____. The bar to imposing an age limit should thus be very high.

36. According to the above passage, imposing a maximum-age limit on elected politicians may _____. [2.1점]

- ① be an ideal solution for the country and politicians

- ② appear sensible, but may pose threats to democracy
- ③ indicate that politicians are public servants
- ④ influence the number of the relatively dangerous jobs
- ⑤ be the primary way to understand the symptom of deeper problems in the States

37. The most appropriate expression for the blank would be _____. [2.1점]

- ① Better just to let voters decide
- ② Age really matters in politics
- ③ Candidates are more intelligent than we think
- ④ There is a strong need to enshrine age limits into law
- ⑤ Supreme Court judges should be served until a designated age

[38-40]

Despite garnering the support and appreciation of a majority of Americans, Roosevelt and his New Deal programs did inspire their fair share of outraged critics. The governor of Louisiana, Huey Long, made a national name for himself breaking his one-time support for Roosevelt and challenging his initiatives, which he saw as too subservient to the demands and desires of corporations and the wealthy. He offered instead his "Share Our Wealth" plan, which proposed to expropriate the wealth of the richest and redistribute it to the poor in the form of a \$5,000 homestead and an annual income of \$2,500. Roosevelt had an equally threatening enemy in the Michigan-based Catholic priest and radio personality Father Charles Coughlin, who ratcheted up the worry of his forty-five million largely white, working-class listeners into a full-scale panic with his anticommunist, anticapitalist, rabidly anti-Semitic diatribes, as he called for a "Christian front" to fight off these forces of evil. Because the hyperbole and hysteria of Long's and Coughlin's rhetoric exhibited more rancor and resentment than reasoned arguments, piecing together their logic is not easy. Nevertheless, they helped inspire sincere dread among their followers that the modern industrial state was horning in on their personal autonomy and _____ on precious liberties.

38. The most appropriate expression for the blank would be _____. [2.0점]

- ① elevating ② looking
- ③ focusing ④ trampling
- ⑤ smiling

39. According to the author, both Long's and Coughlin's criticism of Roosevelt was _____. [2.0점]

- ① persuasive ② self-effacing
- ③ judicious ④ constructive
- ⑤ unreasonable

40. According to the passage, which of the following is correct? [2.1점]

- ① Huey Long criticized Roosevelt throughout his career.

- ② Critics of Roosevelt helped uphold democracy.
- ③ Roosevelt and his New Deal programs garnered an overwhelmingly unfavorable reaction from the public.
- ④ Father Charles Coughlin revealed his antipathy to Jews.
- ⑤ The two critics' arguments were too logical to be criticized.

[41-43]

Art is notoriously hard to define, and so are the differences between good art and bad art. But let me offer a generalization: art is something that results from making a lot of choices. This might be easiest to explain if we use fiction writing as an example. When you are writing fiction, you are – consciously or unconsciously – making a choice about almost every word you type; to oversimplify, we can imagine that a ten-thousand-word short story requires something on the order of the thousand choices. When you give a generative-A.I. program a prompt, you are making very few choices; if you supply a hundred-word prompt, you have made on the order of a hundred choices.

If an A.I. generates a ten-thousand-word story based on your prompt, it has to fill in for all of the choices that you are not making. There are various ways it can do this. One is to take an average of the choices that other writers have made, as represented by text found on the Internet; that average is equivalent to the least interesting choices possible, which is why A.I. generated text is often really bland. Another is to instruct the program to engage in style mimicry, emulating the choices made by a specific writer, which produces a highly derivative story. In neither case is it creating interesting art.

I think the same underlying principle applies to visual art, although it's harder to quantify the choices that a painter might make. Real paintings bear the mark of an enormous number of decisions. By comparison, a person using a text-to-image program like DALL-E enters a prompt such as "A knight in a suit of armor fights a fire-breathing dragon." and lets the program do the rest. Most of the choices in the resulting image have to be borrowed from similar paintings found online; the image might be exquisitely rendered, but the person entering the prompt can't claim _____ for that.

41. The author believes that _____. [2.2점]

- ① A.I. can write fiction in a way similar to how humans do it
- ② A.I. can draw creative paintings on its own
- ③ A.I. generates both textual and visual content through statistical procedures
- ④ It is merely a human-oriented thought that A.I. cannot be a real writer or artist
- ⑤ Humans can collaborate with A.I. to create art by entering a well-crafted prompt

42. What does the underlined “highly derivative” mean? [2.1점]
- ① Every piece of art is, in essence, built upon previous works.
 - ② What A.I. generates is nothing more than a mimicry of art.
 - ③ The stories A.I. produces are identical to those written by human writers.
 - ④ Although A.I. may not create interesting art, it does not mean it lacks originality.
 - ⑤ The stories A.I. writes result from a number of choices it makes.

43. Choose the most inappropriate word for the blank. [2.0점]
- ① originality ② ownership
 - ③ civility ④ kudos
 - ⑤ credit

[44-45]

Political institutions determine who has power in society and to what ends that power can be used. If the distribution of power is narrow and unconstrained, then the political institutions are absolutist. In contrast, political institutions that distribute power broadly in society and subject it to constraints are pluralistic. Instead of being vested in a single individual or a narrow group, political power rests with a broad coalition or a plurality of groups. Max Weber provided the most famous and widely accepted definition of the state, identifying it with the “monopoly of legitimate violence” in society. Without such a monopoly and the degree of centralization that it entails, the state cannot play its role as enforcer of law and order, let alone provide public services and encourage and regulate economic activity. When the state fails to achieve almost any political centralization, society sooner or later descends into chaos. We will refer to political institutions that are sufficiently centralized and pluralistic as inclusive political institutions. When either of these conditions fails, we will refer to the institutions as extractive political institutions.

There is strong _____ between economic and political institutions. Extractive political institutions concentrate power in the hands of a narrow elite and place few constraints on the exercise of this power. Economic institutions are then often structured by this elite to extract resources from the rest of the society. Extractive economic institutions thus naturally accompany extractive political institutions. In fact, they must inherently depend on extractive political institutions for their survival. Inclusive political institutions, vesting power broadly, would tend to uproot economic institutions that expropriate the resources of the many, erect entry barriers, and suppress the functioning of markets so that only a few benefit.

44. What is most appropriate for the blank? [2.0점]
- ① discord ② synergy
 - ③ similarity ④ antagonism
 - ⑤ competition

45. According to the passage, which of the following is a characteristic of extractive political institutions? [2.1점]
- ① They are governed exclusively by a few elites.
 - ② They strive to distribute resources to a broader population.
 - ③ They are often accompanied by inclusive economic institutions.
 - ④ They are pluralistic because power is distributed without constraints.
 - ⑤ They eliminate entry barriers for newcomers in the market and society.

[46-48]

Most broadcast subtitles are prepared in advance, but there are also live subtitles (e.g. for news broadcasts or sports events) which are generally produced by respeaking: in a manner somewhat similar to simultaneous interpreting, a same-language subtitler listens to the audio stream and respeaks the words, for clarity and to remove background noise, into a high-quality audio system, and this ‘clean’ input is then processed by speech-to-text software, with real-time corrections keyboarded by the subtitler as necessary, for display on screen with just a slight delay to account for the production time.

There are significant differences between intralingual subtitles for accessibility purposes and interlingual subtitles done by organizations such as Netflix for people who are not hearing impaired but cannot understand the original language. Subtitling is always a matter of compromise between the conflicting requirements of ①_____ and ②_____ of information. When equality of access to information is the goal, the speech content of the broadcast will as far as possible be transcribed verbatim: any alterations would be confusing for lip-readers, and this kind of subtitle can also support viewers with reading difficulties, as well as language learners.

Accessibility subtitlers can use visual means to convey meta-information about the audio stream: for instance, changes of speaker may be indicated by different colored text, and other significant audio elements (sound effects) annotated in CAPITALS or [square brackets]. On the other hand, a hearing viewer using translated subtitles will typically not need colors or indication of background sounds, but will want a condensed version of the dialogue in their own language that they can read quickly and that distracts them as little as possible from following the video content.

46. The best title of the passage would be _____. [2.1점]
- ① The Secret of Interlingual Subtitle
 - ② Differences Between Intralingual Subtitle and Interlingual Subtitle

- ③ Different Types of Subtitle
- ④ The Role of Subtitled
- ⑤ The Importance of Colored Text in Subtitle

47. The most appropriate words for the blanks ㉠ and ㉡ are _____. [2.1점]

- ① accessibility – variety
- ② readability – digression
- ③ quality – quantity
- ④ accuracy – necessity
- ⑤ completeness – concision

48. According to the passage, intralingual subtitles should be verbatim in order _____. [2.1점]

- ① to make equal access to information for all viewers
- ② to increase the quality of information
- ③ to better serve viewers who are not hearing impaired
- ④ to improve the ability of lip-readers
- ⑤ not to distract language learners' attention from the video content

[49-50]

Neuropsychanalysis is a diverse, interdisciplinary field that comprises the efforts of researchers and clinicians within several branches of psychoanalysis, neuroscience and psychiatry to construct a shared space of inquiry in which to consider how empirical findings and neuroscientific theories can be enhanced by metapsychological knowledge derived from subjective, clinical observation and vice versa. It was named and constituted by a small group of researchers at whose heart lies the psychoanalyst and neuropsychologist Mark Solms.

The main neuropsychanalytic claim is that consciousness must be understood as both affective and embodied and that the Freudian theory of the psychic apparatus, while falling short in bringing together mind, brain and body, nevertheless provides us with the foundations for such an understanding.

49. According to the passage, neuropsychanalysis is NOT _____. [2.0점]

- ① a discipline that compromises the two different approaches
- ② a discipline with a balanced view of consciousness
- ③ a discipline partly built on Freud's theory
- ④ a discipline established solely by one prominent scholar
- ⑤ an interdisciplinary field

50. The underlined "vice versa" suggests that _____. [2.0점]

- ① psychoanalysis and psychiatry would benefit from the empirical knowledge provided by neuroscience
- ② neuroscience should not rely on subjective approaches to understanding the human mind
- ③ neuroscience and psychiatry are distinct disciplines
- ④ researchers and clinicians should cooperate with each other to better understand consciousness
- ⑤ clinical observation often provides a biased view of the human mind
